Description

The Keilbach Jingle Square is a square bell element, which is completely made of high-quality stainless steel and is probably one of the highest quality bell elements on the market. Every time you press a button, you feel the quality of the precision button. It is protected against dust and splash water according to IP66.

It is offered in two sizes: 6 cm edge length and 8 cm edge length, each with a button in 2.8 cm diameter. Both sizes convince with their noble yet minimalist design combined with maximum technical perfection.

When installing the jingle doorbell elements, threaded pins are screwed into the doorbell element. Then drill holes are prepared in the wall. The connection cables from the wall are connected to the contacts of the bell push button. Then the entire bell element is pressed into the holes prepared with dowels.

Technical specifications:

AC voltage: max. load 5 amperes, 12 volts to max. 250 volts

DC voltage DC: load max. 25 Ampere, up to max. 28 Volt

Sealing: Protection class IP66

Contacts: fine silver

Operating temperature: - 20°C to 70°C
